Start

Video is the most difficult type of digital media to process. Consumers and businesses create enormous amounts of video content every day, but much of its potential is wasted. That's because refining rich and meaningful video content has typically been a slow, manual process that involves video editors and designers toiling away on high-end computers. Until now.

This report reveals the building blocks of a real-time video pipeline that will help software engineers make videos with more context, smart editing, useful information density, and higher production values—*without* wasting hours in Adobe After Effects. Author Pauli Olavi Ojala takes you through the automatic production of high-quality videos and introduces types of cost-efficient AI processing that can extract value from large amounts of raw video material.

You'll learn how to:

"Aah, today's paper, right on time as every morning. Thanks, Johnny!"

What a lovely kid, thought Fred while sitting on his withered wooden chair in his front garden, enjoying his fresh breakfast (Frosties) and a cup of coffee (if you lived in the 1960s and didn't have cereal and coffee for breakfast, don't really know what to tell you; you were missing out). The newspaper was the way for Fred to learn about what had happened in the world, the country, and his local community the day before (or many days before) and what might happen in the days ahead. That was actually *The People* newspaper's slogan back then: "The paper that looks ahead." Newspapers were one of the few ways people were able to get access to information (along the TV, the radio, or Suzie and Frank, the next-door neighbors who liked to stick their noses into other people's business), be it news, gossip, sports, science, and so on.
